ASTRONAUT

TO THE MOON

Astronaut is an advanced auto yield token hybrid that will power the Astronaut private sales platform built on the Binance Smart Chain which is the best way to implement advanced decentralized technology to make sure a superior and affordable user experience is achieved.

Designed with the top security Astronaut is an open market for yield farming without the direct need for liquidity pools. During the later phases Astronaut will become a “starter” platform for new projects through its advanced whitelisting and private placement pooling.

Abstract

This document describes the definitions and theory behind Astronaut explaining the different aspects of the implementation. Astronaut aims to solve money issues by using smart chain technology to create a new kind of cryptocurrency, where each coin is backed by BNB, bitcoin and other financial commodities at launch. Astronaut.to “ken” (NAUT) is a promising project for many reasons. With all the DeFi swaps, farms, and pools that are coming out on the Binance smart chain it is hard to choose which is best. Astronaut has taken their concept to another level. In addition, each transaction of Astronaut (NAUT) generates a small transaction fee as a mining fee. Each NAUT increases in real value over time, making Astronaut unique among cryptocurrencies. This paper will explore how Astronaut as an alternative cryptocurrency will function, the products and services associated, the asset details and how Astronaut may result in better outcomes for its participants.

Hybrid Capital Raising Protocol

Built on the Binance Smart Chain

Astronaut is the most elegant and powerful attempt so far to create a faster, adaptive, secure, and cheaper ecosystem built for token pools and auctions, enabling projects to raise capital on a decentralized and interoperable environment

The purpose of this Whitepaper is to present Astronaut and the NAUT token to potential token holders in connection with the proposed token sale. The information set forth below may not be exhaustive and does not imply any elements of a contractual relationship. Its sole purpose is to provide relevant and reasonable information to potential token holders in order for them to determine whether to undertake a thorough analysis of the company with the intent of acquiring NAUT Tokens. Nothing in this White Paper shall be deemed to constitute a prospectus of any sort or a solicitation for investment, nor does it in any way pertain to an offering or a solicitation of an offer to buy any securities in any jurisdiction. This document is not composed in accordance with, and is not subject to, laws or regulations of any jurisdiction, which are designed to protect investors. The product token is not a digital currency, security, commodity, or any other kind of financial instrument and has not been registered under the Securities Act, the securities laws of any state of the United States or the securities laws of any other country, including the securities laws of any jurisdiction in which a potential token holder is a resident.

What is DeFi?

DeFi is an abbreviation of the phrase decentralized finance which generally refers to the digital assets and financial smart contracts, protocols and decentralized applications (DApps) built on a decentralized blockchain

DeFi Ecosystem

The decentralized finance (DeFi) industry today consists mainly of yield farming or staking DApps, decentralized exchanges of tokens, as well as the over-collateralization of digital assets to provide lending and borrowing services.

What is NAUT?

NAUT is an advanced auto yield token-hybrid that will power the Astronaut private sales platform built on the Binance smart chain. Since DeFi holds all the keys to decentralize our current financial system we also need a capital raising infrastructure. Astronaut solves this problem. Our vision & mission is to become the leading private sale and whitelisting platform for new projects entering the BNB ecosystem. NAUT token holders can both stake and pool their tokens to be front runners in new projects and capital raising campaigns that come about on the BNB ecosystem.

How does NAUT work?

Astronaut begins as an auto yield token during its Phase 1 MVP integration. With value of the token going up because of the burn mechanism and holders receiving more supply of the token we cause an anti-inflationary situation. During Phase 2 NAUT holders can begin staking their tokens in liquidity mining pools and yield farms. Phase 3 will begin the evolved platform stage consisting of whitelistings and private placement pools that NAUT holders can participate in.

Instant Yield, Secure, Open Market

Astronaut is an open market for yield farming without the need for liquidity pools or staking.

- 1 **Open Markets**
Market Makers Purchase Astronaut Tokens
- 2 **Slippage Yield Fee**
Slippage is set to 3% which is a purchase fee to get into the yield
- 3 **Distribution of Yield**
2% of fee market makers pay gets distributed to NAUT holders according to their holdings
- 4 **Token Burn**
1% of the fee gets burned forever creating buy pressure and minimizing / squeezing inflation
- 5 **Watch It Moon.**
Token holdings and token value grow when market makers both sell or buy new tokens because of burn and yield redistribution among holders

Astronaut Token (NAUT)

NAUT is Astronaut's token. NAUT is designed to empower the broader BNB ecosystem to drive the creation of fully transparent, community owned, open-source protocol for token pools and auctions enabling projects to raise capital on a decentralized environment based on Binance.

The total NAUT token circulation is

1,000,000,000 , 0,000,000,000

Type: BEP20

Symbol: NAUT

Total Supply: 10,000,000 NAUT

Minimum supply NAUT met

Astronaut Token Use Case

DeFi Infrastructure

NAUT tokens can be staked in various pools for liquidity farming and yield pools

Seed / Whitelisting Auctions

Token holders can stake NAUT tokens for new projects and protocols coming to the BNB ecosystem. NAUT holders will have the opportunity to be front runners during this stage.

Auto yield phase

During NAUT's build out holders of the token will receive a yield during any transaction that takes place on the NAUT network. Meanwhile, the token supply will begin to burn causing an anti-inflationary scenario

Astronaut Project Phases

Phase One

This will start with the launch of a minimum viable product (MVP) on the BSC network. Goal of phase 1 is to test the swap and token sale dynamics, gather feedback, and prepare for an evolved infrastructure for Phase 2. Meanwhile auto yield tokens will be enabled for token holders to grow value from token transactions directly into their wallets.

01

Phase Two

This will see the full integration and development launch of the working product on the Binance ecosystem, enabling liquidity mining and pools to raise funds for NAUT to launch the Phase 3 which Astronaut's native token will work on. We will prepare partnerships with various DeFi and BNB projects.

02

Phase Three

With a complete BSC environment, we will enable new Binance projects to raise capital through our new built out platform meanwhile allowing NAUT holders to participate in private whitelist and token sales. Private placements and public crowd-sales will be available. Our vision is for Astronaut to be the leading decentralized way Binance projects and ideas raise capital. We will offer cross-chain pools and token sales through our swap

03

Roadmap

Our NAUT token holders can stake in private pools to get into whitelisting and new projects coming to the BSC.

Q1 2021

Astronaut 1.0 (BNB Beta)

- ✓ Private sale
- ✓ UI Buildout 1.0
- ✓ Token Auto Yield
- ✓ Burn Mechanism
- ✓ Liquidity Mining
- ✓ Anti-scam features such as smart contract verifications
- ✓ Partnership with DeFi platforms
- ✓ Certik Audit

Q1

Q2

Q3

Q4

Q2 2021

Phase 2 Development

- ✓ UI/UX Changes
- ✓ Platform redesign
- ✓ Private sales Platform - rocket ship protocol
- ✓ Multi-wallet smart contract integration

Q3 2021

Phase 3 Development

- ✓ UI / UX Optimization
- ✓ Key token swap information, including smart contract, swap ratio
- ✓ Swap public and private pools
- ✓ Private pools with passwords for OTC and private-sales
- ✓ Slippage price alerts (for 2.0 integration only)
- ✓ Pool swap page with features like max pool amount
- ✓ Max investment per user limits (for 2.0 integration only)
- ✓ English, Chinese, Arabic, Spanish and Korean languages

Q4 2021

Astronaut 2.0

- ✓ Fully functional swap platform
- ✓ BNB whitelisting pooling and private sales
- ✓ Permission-less listings
- ✓ Cross-chain token swaps
- ✓ Multi chain token pools
- ✓ Staking for Governance
- ✓ Voting proxy feature
- ✓ KYC integration for private placements
